- (a) Network congestion;
- (b) End user's geographical location;
- (c) End user's distance from the relevant exchange;
- (d) The equipment and software used by the end user in connection with the broadband service (for example, the end user's internet browser, internet filters and computer);
- (e) General internet traffic; and
- (f) The quality, nature and capability of the underlining infrastructure.

41.4 Other factors may influence the particular speeds or latency Customer's end user can achieve to servers nationally and internationally. SurgePoint's control of these speeds is limited to its own network. Connections

to servers outside the SurgePoint network are on a “best effort” basis and it may not be possible for Customer to achieve Customer’s desired or expected speeds or latency where Customer is connecting to Non-SurgePoint equipment outside SurgePoint’s control.

41.5 Unlimited plans are intended for use by a single end user and broadband connectivity services must not be resold by the Customer or end users. Running server farms or sharing a connection across multiple end users is prohibited.
